

BURNABY HOSPITAL REDEVELOPMENT

Project Overview

Fraser Health respectfully acknowledges that Burnaby Hospital is situated on the traditional, ancestral and unceded territories of the *səlilwətaʔ* (Tsleil-Waututh), *Skwxwú7mesh Úxwumixw* (Squamish) and *xʷməθkʷəy̓əm* (Musqueam) Nations.

The Burnaby Hospital Redevelopment Project will transform the hospital into a modernized medical and surgical health care campus. It will replace aging infrastructure, accommodate new services, and meet the increasing health care needs of this growing community for generations to come.

Phase One (2021-2026)*

The first phase will include the construction of a new pavilion and the expansion of the existing Support Facilities Building.

The new six-storey pavilion will have 83 beds, in primarily single-patient rooms with private bathrooms. It will include:

- **mental health and substance use unit** with a secured outdoor patio to enhance healing
- **maternity unit** that will provide single-room maternity care, where individuals will go through labour and delivery, and will recover for the rest of their stay in the same comfortable room
- **neonatal intensive care unit** with single rooms for more privacy and comfort for families as well as support best practices for infection control
- **medical unit** with negative pressure rooms and outbreak zones to enhance infection control
- **underground parking** for improved accessibility

The expansion and renovations of the Support Facilities Building, which includes the Jim Pattison Surgery Centre and the Burnaby Community Emergency Department, will feature:

- **larger emergency department**, reducing wait times and providing greater patient privacy
- **additional operating rooms and procedure rooms**, increasing the number of surgeries performed
- **additional pre-operative and post-operative recovery spaces**, enhancing patient privacy and creating efficiencies
- **new medical device reprocessing department** with improved infection control
- **new energy centre**, creating more electrical capacity to support the hospital's growth

Phase Two (2025-2030)*

The second phase will increase the hospital's bed capacity. It will include:

- **the new Keith and Betty Beedie Acute Care Tower** with 160 beds to include general medicine, medical oncology, cardiac telemetry, and critical care units
- **the new BC Cancer - Burnaby McCarthy Centre**
- **new medical imaging department**
- **emergency department expansion**
- **endoscopy renovations**

**Dates are estimated and may be subject to change*
