

## Fraser Health UCI Network Access

### What's happening?

- **MEDITECH** is one of the Fraser Health's core health care information systems. It allows clinical and administrative staff to capture, deliver and access health information. The system is only available to Fraser Health employees.
- **Unifying Clinical Information (UCI) Network** is a web application and clinical viewer which provides an integrated view of data from MEDITECH and is available to Fraser Health affiliated long-term care (LTC) and assisted living employees.
- UCI provides you with quick access to your resident's health information and allows you to see:
  - Acute care records, including emergency records, consults and discharge summaries.
  - Diagnostic imaging reports from all public facilities.
  - Community documents, including home health, mental health & substance use and public health.
  - Provincial lab results, including all public and private labs.
  - Medical orders for scope of treatment documents.
  - BC Cancer Agency documents.
  - BC Children's and Women's documents.

### How will this benefit me?

- **The UCI Network benefits you by:**
  - Increasing access to relevant resident information
  - Decreasing time to access and review resident information
  - Decreasing time to share resident information
  - Decreasing duplication of clinical treatments and service provisions

### Questions?

If you would like to gain access to the UCI Network or want any further information, please reach out to Susan Roberts, administrative assistant with LTC Contract Services, at [susan.roberts@fraserhealth.ca](mailto:susan.roberts@fraserhealth.ca).
