

# Nurses Experiences of Caring for Older People during Climate-Related Weather Events in Canadian Long-term Care Homes

## What is the Study About?

In Canada, we are experiencing an unprecedented increase in climate-related weather events. Older people are particularly vulnerable during these events, especially those living in long-term care homes.

Nurses play a key role in supporting residents during these events.

We want to learn about nurses' experiences and the strategies they use when caring for residents during climate-related weather events.

## Who can Participate?

NURSES, including Licensed Practical Nurses, Registered Nurses, Registered Practical Nurses, Registered Psychiatric Nurses (inclusive of staff nurses, managers/DoCs, advance practice),

WHO work in long-term care homes, AND have cared for residents during a climate-related weather event (e.g. wildfires, heat/extreme temperatures, flooding, etc.).

## What Will You Be Asked To Do?

You will participate in an interview with a research team member via Zoom.

The interview will last about one hour.

You will also complete a demographic form.

## Who is on the Study Team & How Can You Participate?

Dr. Jennifer Baumbusch & team from the UBC School of Nursing.

For more information about participating in the study, please email Jennifer at [gero@nursing.ubc.ca](mailto:gero@nursing.ubc.ca).

We are recruiting until June 30, 2024

Please note that if you choose to respond to this page on social media platforms (e.g. "like") you may be publicly identified with the study through your profile
