

**PHASE ONE  
HELIPORT MOVE**  
Now to Summer 2017

Our heliport is moving to the roof of the hospital's Columbia Tower near East Columbia Street

The heliport will be moved to the hospital's west side, safely away from construction cranes used to build Phase One and Phase Two.

Flight paths will change, and adhere to Transport Canada guidelines.

The long-term plan includes a new heliport on the roof of Phase Two's acute care tower which will be the hospital's tallest building.

Columbia Tower's heliport will have different flight paths. If Phase Two of the redevelopment is approved the eastern 'temporary' path will close once construction of the acute care tower starts.

Construction is underway on Columbia Tower's heliport. Helicopters will start landing on it in September 2017 using the new approach and take-off paths.

Our existing heliport is too close to construction cranes that will be used to build Phase One and Phase Two. It will be closed at the end of Summer 2017 and later removed.
